Computer Vision

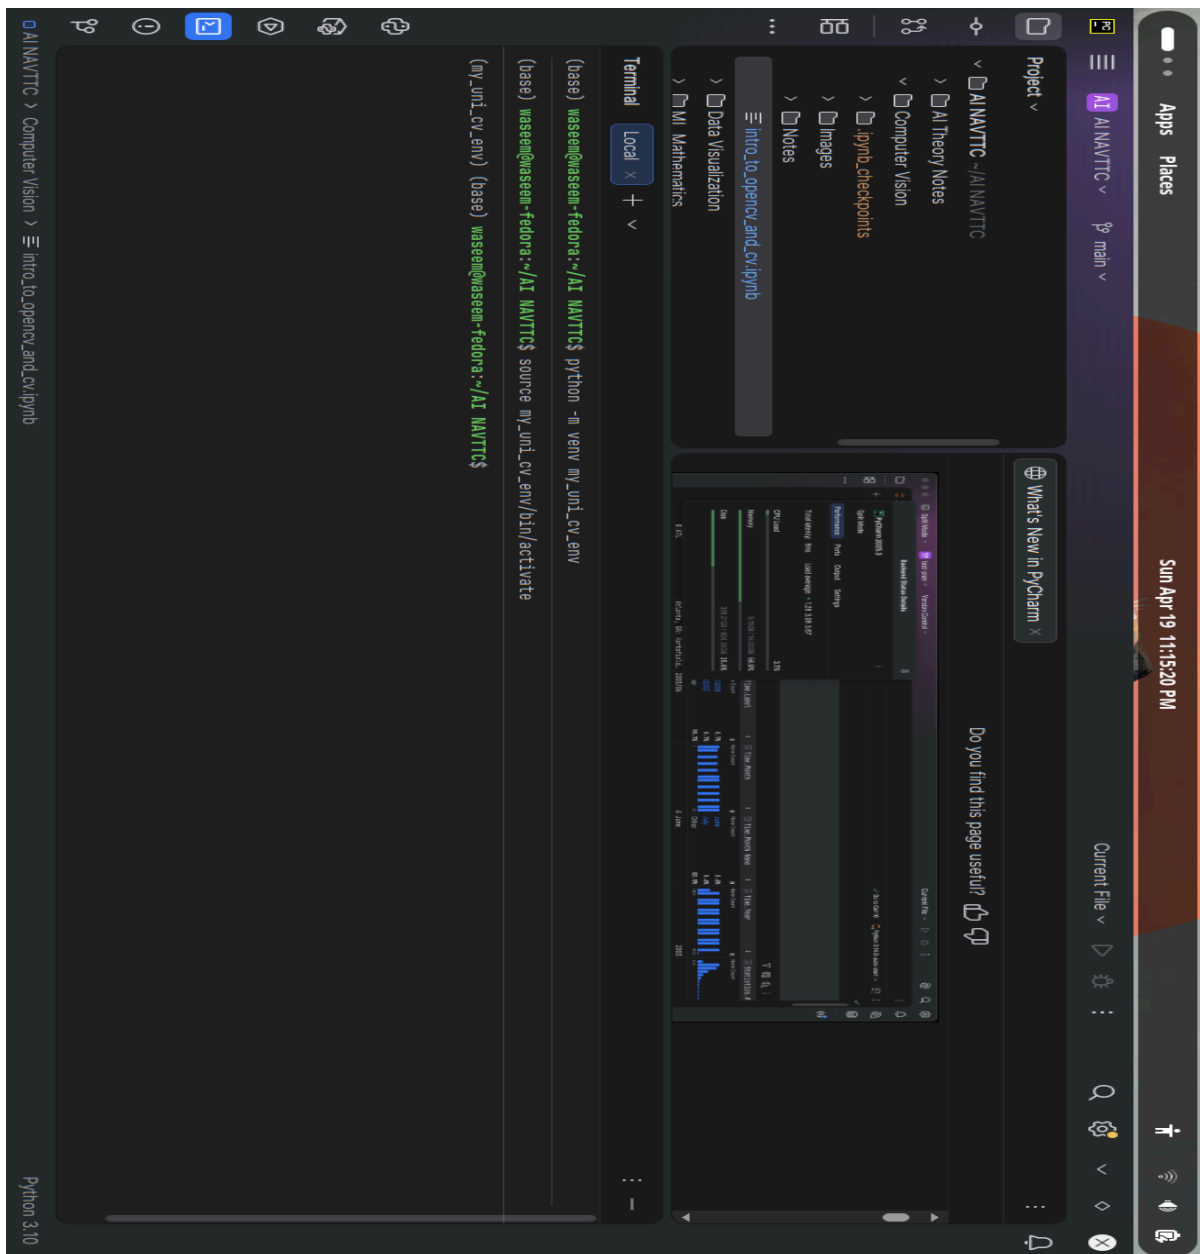

Assignment 1

Part 1: Fedora 43 installed on my Laptop:

A screenshot of a laptop screen showing a terminal window. The terminal is titled 'waseem@waseem-fedora: ~ — python3'. The background of the laptop shows a scenic view of a lake and trees. The terminal output shows the user running 'python3' which enters the Python 3.13.11 shell. The user then runs '2+3' which outputs '5'. Next, the user runs a series of list operations: 'a=[1,2,3,4,5]', 'print(a)' (output: '[1, 2, 3, 4, 5]'), 'a.append(4)' (output: '[1, 2, 3, 4, 5, 4]'), 'a' (output: '[1, 2, 3, 4, 5, 4]'), and 'a.pop(4)' (output: '5'). Finally, the user runs 'a' again, which outputs '[1, 2, 3, 4, 4]'. The terminal also shows the removal of the element 4 from the list: 'a.remove(4)' (output: '[1, 2, 3, 4, 4]') and 'a.remove(4)' (output: '[1, 2, 3]').

```
(base) waseem@waseem-fedora:~$ python3
Python 3.13.11 | packaged by Anaconda, Inc. | (main, Dec 10 2025, 21:28:48) [GCC 14.3.0] on Linux
Type "help", "copyright", "credits" or "license()" for more information.
>>> 2+3
5
>>> a=[1,2,3,4,5]
>>> print(a)
[1, 2, 3, 4, 5]
>>> a.append(4)
>>> a
[1, 2, 3, 4, 5, 4]
>>> a.pop(4)
5
>>> a
[1, 2, 3, 4, 4]
>>> a.remove(4)
>>> a.remove(4)
... )
>>> a
[1, 2, 3]
```

PyCharm and My Python Virtual Environment
(environment name: **my_uni_cv_env**)
Installed on my Laptop and running perfectly:

Jupyter Notebook, Ipykernel and OpenCV installed in my “**my_uni_cv_env**” virtual environment:

```
(my_uni_cv_env) (base) waseem@waseem-fedora:~/AI NAVTTC$ pip install opencv-python jupyter ipykernel matplotlib numpy pandas
